

**Cincom at JAOO Conference
in Aarhus, Denmark – October 7, 2009:**

"The Sky's the Limit: Cincom WebVelocity™"

The JAOO conference is made for developers by developers. It is a highly regarded international conference that will take place from October 5th to 7th in Aarhus, Denmark.

Cincom will be presenting its new product, Cincom WebVelocity, at the JAOO conference. Web Velocity is an all-in-one environment that allows web applications to be easily and quickly developed and deployed – within a single integrated product. Its in-browser development environment can be deployed in or out of the cloud. Reducing both development and deployment times, it provides a truly agile integrated environment for cloud computing.

We're very pleased that **our first European WebVelocity customer, Ernest Micklei from PhilemonWorks, has agreed to share his first-hand experiences.** He'll demonstrate how WebVelocity provides an interactive all-in-one environment to improve productivity, performance and reliability, how maintainability benefits from an integrated commercial environment and how to deploy the application in a staging environment.

Mark your agenda in order not to miss this talk. We look forward to seeing you in Denmark!
